Touch ‘n Seal® TWO-COMPONENT FOAMS Now Offer Updated, Easier-To-Use, Easily Identifiable Packaging

St. Louis, Missouri – Convenience Products, manufacturer of Touch ‘n Seal insulating foam products has updated and refined the packaging for Touch ‘n Seal two-component spray polyurethane insulating foams. Formerly known as the U2-12, 22, 200, and 600(FR) kits, the revised **Foam Kits 15, 120, 200, and 600** have a number of new packaging features to simplify application and handling for end users.

“Our two-component foams have always been known for their performance,” says Larry Pennock, Vice President of Sales and Marketing, “but we knew there were several features we could add that would simplify use and reduce worries for the end user. These new features are great value-added benefits that will make our already popular foam a clear choice for contractors.” The new packaging features include: Pre-attached hoses, a new “Comfort-Grip Handle,” new “Rip ‘n Go” top that tears off to expose the handle and pre-attached hoses, easy-to-follow illustrated instructions for use and gun nozzle changeovers, new color on guns and nozzles. The packaging is also trilingual and color-coded for easy identification.

Touch ‘n Seal two-component polyurethane foam systems are designed for use in commercial sealing, insulating, patching and filling applications. The high closed-cell content of the cured foam makes it suitable as a general sealant to prevent air leakage in cold storage and other insulating/sealing applications. Two-component systems provide fast, even foam flow that cures in 45 seconds, making it ideal for vertical applications. All Touch ‘n Seal two-component foams are self-contained, portable, disposable units with no CFC’s or urea formaldehyde, and are available in fire-resistant formulations (FR). Touch ‘n Seal is available nationwide. For a local distributor, please call Convenience Products Customer Service at 1-800-325-6180.

Convenience Products is a division of Clayton Corporation, headquartered in St. Louis, Missouri, and also manufactures Touch ‘n Foam one-component foams for the do-it-yourself market.
