Touch ‘n Seal® NO-WARP WINDOW & DOOR FOAM Eliminates Worries for Insulating Contractors and Window & Door Installers.

St. Louis, Missouri – Convenience Products, manufacturer of Touch ‘n Seal insulating foam products now confirms that Touch ‘n Seal No-Warp Window & Door Insulating Sealant has been tested by an independent laboratory and proven to meet or exceed AAMA standard 812-04 for low pressure insulating foams. In that independent testing, Touch ‘n Seal No-Warp outperformed all other foams tested for curing force. Therefore, Touch ‘n Seal No-Warp insulating sealant can be confidently used in installations of original or retrofit aluminum and vinyl windows without fear of overexpansion.

“No-Warp not only builds less pressure during initial installation, but drops to “zero” pressure sooner than other tested foams,” says Joe Lott, Vice President of R&D. “In fact, after ten minutes, No-Warp exerts zero pressure through total cure. Zero pressure means zero worries for insulating contractors and door & window installation.”

Touch ‘n Seal No-Warp Foam Insulating Sealant is a bright white one-component polyurethane foam specially formulated for use around window and door frames – providing airtight insulation that blocks drafts, moisture and insects without bowing the frame. Gun-applied, No-Warp can be used under the plate line, at the juncture of the plate line and the slab or foundation, and any penetration through the top or the bottom plate line into a conditioned area. It fills cracks and holes in the exterior sheeting (due to poor application or penetrations made for utility services), at the corner and tee joints in framing, and any other place where air might penetrate the exterior envelope or where the pressure from standard foam products could cause damage. Touch ‘n Seal is available nationwide. For a local distributor, please call Convenience Products Customer Service at 1-800-325-6180.

Convenience Products is a division of Clayton Corporation, headquartered in St. Louis, Missouri, and also manufactures Touch ‘n Foam one-component foams for the do-it-yourself market. ###
